

Etude de l'existant

1. La tablette BrailleNote Touch

Powered by Android and driven by KeySoft, BrailleNote Touch Plus offers an immersive and connected experience in multiple languages. It is equipped with a unique touch screen that makes communication between students and teachers fully interactive.

This powerful note taker, equipped with an ultra-fast processor, makes it easy to write assignments or create graphics without making noise. You can download and read books, watch YouTube videos, send emails and share content on Dropbox and Google Drive cloud services. BrailleNote Touch Plus gives you both the means to learn effectively and the power to fuel your goals, from grade school to the workplace.

2. L'application BrailleTouch

BrailleTouch is a smartphone app that allows blind and visually impaired people to type on a touchscreen. It is based the familiar six-key braille keyboard found on the Perkins Brailier and many electronic braille notetakers. More information can be found at:
